

TRASYS is active in a wide range of services and competences covering 4 activities: Business Consulting, System Development & Integration, Operational Services and Technical Assistance (sourcing)

Trasys has also more than 30 years of presence in JET (EU fusion reactor)

Focused on value creation and innovation in constantly changing environments, TRASYS enables customers to focus on their core business while capitalising on existing IT investments.

TRASYS enjoys the trust of over 300 customers in sectors like international organisations, financial Services, industry, public sector, utilities and aerospace.

Trasys is also involved in Robotics:
For ESA, TRASYS participates to the software specification and development of the control system of the Rover sent to Mars.
With more than 30 years of presence at JET and in the space and nuclear sectors designing and developing the software of sophisticated control systems, Trasys would like to offer its competencies to participate in the development of the CODAC system.

Among the services Trasys could offer to ITER we can find:

- consultancy in TOKAMAC expertise
- software engineering
- project management
- system integration
